EDUCATION

M.S. Software Engineering

Graduated December 2023

Kennesaw State University

- Awarded Dean's 4.0 GPA List

B.S. Information Technology (Web and Mobile Systems)

Graduated July 2020

Kennesaw State University

- Awarded President's List (4.0 GPA) in 2017

EXPERIENCE

Freelance Web Developer

February 2025 – Present

- Developing 2 client websites across healthcare and education industries using WordPress, PHP 8, HTML5, JavaScript, and CSS3, with responsive design principles
- Create custom contact forms and dynamic site functionality tailored to client needs to improve user experience and drive engagement
- Modify and extend the WordPress interface to create intuitive, user-friendly content management experiences for non-technical users
- Collaborate with clients to translate business requirements into functional, accessible web solutions which achieve business objectives
- Consult with clients to plan deployment and maintenance strategies to optimize costs and efficiency

Full-stack Software Engineer – The Entryway Surgeons

January 2026 – March 2026

- Modernized a legacy Laravel platform by upgrading the application stack to Laravel 12, PHP 8, Tailwind CSS v4, and Alpine.js, improving maintainability, responsiveness, and frontend performance, boosting audience by 2000 impressions
- Developed and integrated OAuth-based Google Business Profile synchronization services, automating customer review ingestion and management workflows
- Enhanced administrative tooling and content management workflows, reducing weekly operational overhead by several hours
- Improved SEO contributing to increased online visibility and generating more than 20 new customer leads in a competitive market
- Provided ongoing maintenance support and periodic updates, with additional rebranding development planned in future phases

Full-stack Software Engineer – The Entryway Surgeon

August 2019 – February 2022

- Designed and developed a full-stack responsive web platform using Laravel 8, PHP 7, JavaScript, jQuery, HTML5, and CSS3, gaining the company more than 2000 impressions
- Implemented multimedia gallery systems, custom administrative functionality, and customer feedback features, backed by relational database structures, to improve client engagement and content management capabilities
- Managed ongoing website maintenance, performance optimizations, feature enhancements, and platform upgrades
- Developed internal administration functionality to streamline business operations and improve content publishing efficiency
- Engineered Python and C# automation tools reducing image processing workflows from multi-day manual processes to under two hours
